Breedio Nest System

For the highest amount of perfect quality hatching eggs.

The Breedio nest with center egg belt offers a quiet and hygienic place for birds to lay their egg. Eggs have minimal contact with the open and soft mat. The short rolling distance to the egg belt preserves the quality of the egg. The curved design of the automatic expel system provides a bigger internal volume for the birds.

Holes on top of the expel system provides a better air circulation. The plastic structure of the nest doesn't allow bacterial growth and is very unattractive for lice and mite.

Plastic slats

The slats are designed to give optimal support and grip to the birds feet. This is not only important in order to avoid leg problems but also gives optimum support during mating. Good manure passage allows hygienic conditions and contributes to clean slats and nests.

Reliable, durable and thoroughly tested poultry equipment. Proven worldwide since 1962.

Options:

- Crossovers
- Egg collection table
- Manure belts underneath slats
- Egg collection cross conveyors
- Hatchery Packers
- Egg counters

Why choose our Breedio Nest system?

- Maximum number of first class hatching eggs
- Up to 50% labour saving
- Improved hygiene
- Cracked and dirty egg numbers are kept to a minimum
- Easy to install

Nest System

Traditional laying nest to achieve the highest amount of consumption eggs

JEL POULTRY

Fitted systems for optimum comfort and productivity

Why choose our Nest system?

- Well accepted by the birds
- High egg quality
- Less floor eggs
- Hygienic environment
- Easy to manage
- Automation of egg collection

Options:

- Wire or plastic slats
- Slat on top
- Manure belts underneath slatted area
- Anti-perching device on roof
- Different extras for nest (Egg curtains, nest rejection grid)
- Egg collection systems (cross belts, collection tables, elevator)
- Water pressure regulation

Our Nest system provides a very hygienic environment for egg production and helps in reducing heat accumulation inside the nest. The nest material is also very unattractive for red-mite.

The nest provides hens with a comfortable and hygienic environment to lay their eggs. The high nest entrance allows birds to easily enter and leave the nest, sliced curtains at the entrance create shadows in the nest and therefore help to avoid mislaid eggs. At night the floor is lifted and the nest is closed so the birds have no entrance and the nest keeps clean.

Inside the nest an Astroturf mat keeps the nest clean and hygienic and provides the hen with a comfortable surface for laying the eggs. The egg has a short rolling distance from the nest to the egg belt in the centre of the nest, this also avoids cracked eggs. Drinker line in front of the nest leads to high nest acceptance and usage.

Various designs

The nests are available in various designs single nests, double tier and the nest is also incorporated in our aviary systems. Different types of egg collection systems can be combined with the nest depending on your wishes.

All systems can be adapted to fit your facility perfectly. We're here to help - please call us for more information
