Pedigrow Rearing system

Give your birds a perfect start into aviary systems

The Pedigrow rearing system trains young hens in all aviary relevant system elements. This way birds learn everything they need to optimally perform in aviary systems.

The multi-tier rearing system is giving you full control over feed, water, manure belt & lighting systems. The middle tier has compartments for the placing and brooding of day old chicks. Depending on local regulations or stocking densities the bottom tier can optionally be ordered as a day old chick tier. After a few weeks the day old chicks brooding tiers open up and the system converts into a cage-free environment for the birds. To prevent you from attaching different parts to the system at different ages, certain elements are multifunctional. When opening up the system, parts of the doors are folded up and create rigid platforms positioned at different heights. Other door components become now ramps for the pullets allowing them to easily walk, jump and fly within the system and between rows of the system.

The design of the top tier is comparable to those in a layer aviary.

This comes with perches as well as raised drinkers and feeder lines preparing birds perfectly to eat and drink from perches.

The system is also available with raised legs giving the birds additional scratching area underneath the system.

Easy vaccination

The Pedigrow rearing system consists of several compartments, which simplifies the catching and vaccinating of the hens. Each compartment can easily be opened for inspection, vaccination or catching.

The 2 bottom tiers are equipped with adjustable water lines. The top tier has one fixed waterline.

Different types of nipples train the birds perfectly for a variety of nipples that are used in layer aviaries.

Feed is included on all 3 levels. LED lights are installed at the brooding tiers to assist in promoting proper bird behaviour.

Reliable manure removal

Salmets proven manure drive system is used in the Pedigrow system giving you reliable manure removal.

Reliable, durable
and thoroughly tested
poultry equipment.
Proven worldwide
since 1962.

Pedigrow Rearing System

JEL POULTRY

Fitted systems for optimum comfort and productivity

Example of a house equipped with a Pedigrow Rearing System:

All systems can be adapted to fit your facility perfectly. We're here to help - please call us for more information

	Standard	Options additionally available
Day-old chick tiers	1	1
Perches*	11	4
Feed lines	6	
Drinker lines (tier 1 & 2)	4	
Drinker lines (top tier)	1	
Nipple per section (tier 1 & 2)	24	
Nipple per section (top tier)	3	
Rear partition	1	2
Doors	4	4
Foot shutter	-	2

* Round perches can't be placed extra on top of the feederlines

Option: Closed top tier with 3 tiers for raising birds

D.O.C. not allowed and only available in combination with raised legs.

Why choose othe Pedigrow system?

- Perfect trained hens
- Higher rearing density
- Uniform pullets
- Low maintenance

Options:

- Raised legs with closing grit
- Bottom tier as day-old chick tier
- Rear wall for bottom tier with second nipple line
- Rear wall top tier
- Additional perches on top tier (1-4 perches)
- Different perch shapes
- Closed top tier

Call us for advice on how to optimise easy management,
animal welfare - and maximise profitability.
